# Team Index UBLends Style Guide

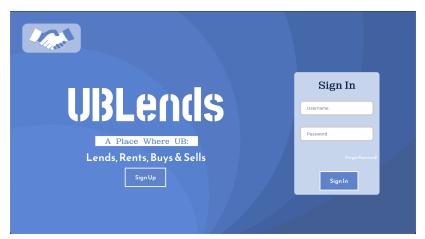

18th March, 2022

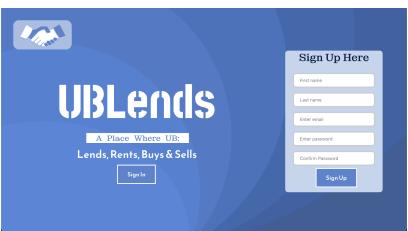

# Page Layout and Style Specifications:

# Landing and Authentication related pages:

# Page layouts and/or templates:

# Navigation styles:

- Buttons used as a medium of navigation.
- Text on the button specifies the task that button performs.
- Forgot Password uses a Text link in the SignIn Box to redirect to the corresponding page.
- Logo on Top redirects to Landing Page.

# Icons and logos:

# All images can be found in the 'images' folder / directory.

- indexImage.png is used on Landing Page (On Right side of the Page. Authentication Forms replace the image in the following pages.)
  - **Size:** height: 95%; width: 85%;
- logo.png
  - Stays on top of the page. Also redirects to the Landing page.
  - Size and Margins:

```
o margin-top: 3%;
margin-left: 3%;
height: 100px;
width: 200px;
```

# Typography:

We use Google Fonts. This helps us show the same fonts to everyone irrespective of machines and browsers that individual users are using to interact with our platform.

### **Fonts Used and Sizes:**

**Everything Else:** 'Reem Kufi' (Size may Vary depending on use)

### Colors:

Background: Background has multiple variations of blue. To avoid future color code issues, the team has decided to make a PNG image of the background and use it as a background.

(Sign In / Sign Up/ Forgot Password/ Confirm Logout) Box:

```
background-color: rgb(198, 213, 235);
```

# **UI Components:**

**Buttons:** Redirect to further pages depending on what is mentioned on buttons.

**Logo:** Can be used to redirect to the landing page.

Forgot Password Link: Redirects the user to forgot password widget page.

# Behavioral patterns:

All boxed <div>s have round edges.

Buttons on the above mentioned pages have no round edges.

Buttons change color properties on hover.

# Performance guidelines:

The idea is to use the least amount of interactive buttons and UI components on these pages so that users find it easy to navigate and work on our application. In simple words, We at Index, keep our designs simple but classy. Sign Up uses minimal information so that users find it easy to join our platform.

# Home and Subsequent Pages: (Subject to change)

# Page layouts and/or templates:

# Navigation styles:

- Buttons and Listings are used as a medium of navigation.
- Text on the button specifies the task that button performs.
- Logo on Top redirects to Landing Page.
- Profile picture on the top is a button to a drop down menu that exposes a few options.

# Icons and logos:

# All images can be found in the 'images' folder / directory.

- displayPicture.png used to toggle between personal account settings.
- logo.png
  - Stays on top of the page. Also redirects to the Landing page.
  - Size and Margins:

```
o margin-top: 3%;
margin-left: 3%;
height: 100px;
width: 200px;
```

# Typography:

We use Google Fonts. This helps us show the same fonts to everyone irrespective of machines and browsers that individual users are using to interact with our platform.

### **Fonts Used and Sizes:**

# Colors:

Background: Background has multiple variations of blue. To avoid future color code issues, the team has decided to make a PNG image of the background and use it as a background.

Listing Box Background Color:

```
background-color: rgb(198, 213, 235);
```

# **UI Components:**

**Buttons:** Redirect to further pages depending on what is mentioned on buttons.

**Logo:** Can be used to redirect to the landing page.

**Display Picture:** Redirects the user to forgot password widget page.

**Listings:** Allow the user to know more about the product they clicked.

# Behavioral patterns:

All boxed <div>s have round edges.

All buttons should redirect or allow the user to do what is mentioned on them.

# Performance guidelines:

The idea is to use the least amount of interactive buttons and UI components on these pages so that users find it easy to navigate and work on our application. In simple words, We at Index, keep our designs simple but classy. The design should ideally be intuitive and user friendly. Ideally the user should not have to think 2 times before making a decision about using the application. If a user wants to see a product, clicking any part of that UI component should trigger the page to redirect. There may be developments in the style guide based on the modifications that are made during the course of the application development.
